

FeatherBrite Assembly Instructions for the Universal Light

Remove the 4 (four) wing nuts and washers and attach the wires as shown. The wire extender should be extending over the back of the cage far enough so that your pet cannot reach the electrical cord.

Stainless steel wire supports can be mounted either direction front to back or right to left, depending on your cage bars. After attaching the supports, push the large loops between the cage bars. The light should fit securely. You can use the loops to hang toys, treats or whatever your bird likes.
